setjmp/longjmp

[Figure 7.11

```
#include "apue.h"
#include <setjmp.h>

#define TOK_ADD      5

jmp_buf      jmpbuffer;

int
main(void)
{
    char      line[MAXLINE];

    if (setjmp(jmpbuffer) != 0)
        printf("error");
    while (fgets(line, MAXLINE, stdin) != NULL)
        do_line(line);
}
```

[Figure 7.11(cont'd)

```
    exit(0);
}

...

void
cmd_add(void)
{
    int          token;

    token = get_token();
    if (token < 0)          /* an error has occurred */
        longjmp(jmpbuffer, 1);
    /* rest of processing for this command */
}
```

[setjmp]

- #include <setjmp.h>
- Int setjmp (jmp_buf env);
 - Stores current state of main at the start of program exec.
 - Returns: 0 if called directly, nonzero if returning from a call to longjmp.
 - EX:
 - jmp_buf jmpbuffer;
 - int i = setjmp(jmpbuffer);

[longjmp]

- #include <setjmp.h>
- void longjmp (jmp_buf env, int val);
 - Return to the setjmp()
 - val is a nonzero value that becomes the return value from setjmp.
 - EX:
 - longjmp(jmpbuffer, 1);
 - longjmp(jmpbuffer, 2);

[Compare function]

■ Character compare:

- `char* strchr(char * str, int character);`
- EX:
 - `char* cptr = strchr(str, '@');`

■ String compare:

- `char* strstr(char * str1, char * str2);`
- EX:
 - `char* cptr= strstr(str, "..");`

A decorative graphic consisting of a thin gold circle on the left and a horizontal bar extending to the right. The bar has a gold-to-white gradient. A large black '[' bracket is on the left, and a gold ']' bracket is on the right.

Requirements

[Requirements]

- Use setjmp/longjmp to implement a checker program for email addresses.
- Print out messages to show the errors detected.
- You need to implement only the given checking rules, i.e., you do not need to confirm everything.

[Requirements(cont'd)]

- Email checking rules:
 - One and only one '@' is allowed.
 - Special characters such as sharp '#', Asterisk '*', doubleDot '..' are not allowed.
 - There should be at least one '.' behind the '@' character.

[Example]

- Example
 - spta@embed@ded..cs.ccu.edu.tw
 - @ found at 5
 - @ found at 11
 - Email format error: more than one @

[Result of Requirements]

- Submit the following in table (Answers.doc):
 - Where are the errors located?
 - What is the error message format?
 - (you must not print any message after you print error)
 - How did you use the setjmp/longjmp functions?
 - Final results.
 - Please attach screenshot !
